3.6 Assignment 6 Final Documentation and Submission Package.....	24

Verification Note

This contribution table was finalised at **31 May 2026, 11:30 pm AEST**, approximately nine and a half hours before the Assignment 6 submission deadline. By that time, the final repository history, documentation package, and available evidence had been reviewed and recorded.

Nishad had been given multiple opportunities to push his remaining implementation work before the final submission period. However, no commits attributable to Nishad were visible on the main branch when this table was finalised. As a result, the coding contributions listed for Nishad in this document reflect reported or allocated work only. They could not be independently reviewed, tested, or confirmed against the repository before the contribution table was frozen.

For the purposes of verified final implementation, integration, testing, documentation, and submission preparation, SmartResearch was effectively completed as a two-person working project by Chelsea and Noor, with Nishad contributing presentation delivery, demo recording, and technical-video narration.

0. Repository Evidence Snapshot

The repository history below reflects the state of the SmartResearch GitHub repository as at **31 May 2026, 11:30 pm AEST**. The Assignment 6 submission deadline was **1 June 2026, 9:00 am AEST**.

At the time of this snapshot, the main branch contained 183 commits. The visible commit breakdown was:

Contributor	GitHub Account	Commits Visible on main
Chelsea Okan	auweii	147
Noor Ahmed	noorahmedraza13098-dotcom	35
Dr. Jack Yang	jiey-nlp	1
Nishad Gyawali	No attributable account visible in the commit history	0

The repository history also showed that branch-based contributions had been used throughout the project. This included the auweii/Noor branch, which was merged through Pull Request #6 on 19 March 2026, and the jiey-nlp/patch-1 branch, which was merged through Pull Request #2 on 19 September 2025. All team members had access to the repository and could push completed work before the snapshot was recorded. Nishad had also been asked to push the remaining code before the final submission period so that testing, screenshots, and documentation could be completed against the final build. At the time of the snapshot, no commits attributable to Nishad were visible on main.

This does not rule out work completed locally. However, any work that had not been pushed to the repository by **31 May 2026, 11:30 pm AEST** could not be independently reviewed, tested, or counted as verified repository contribution.

Commit totals should be read alongside the changed files, branch history, meeting records, documentation outputs, and other completed deliverables. They are included as supporting evidence rather than as the sole measure of contribution.

Post-Snapshot Addendum

After the contribution table was finalised at **31 May 2026, 11:30 pm AEST**, Nishad pushed commit 815042f to the main branch during the morning of **1 June 2026**, the day of submission. The commit modified 35 files and should be recognised as a substantial late implementation contribution.

This update was not available during the original repository snapshot or the earlier final-consolidation period. Noor completed post-snapshot runtime verification during the morning of submission and confirmed that the updated build was running successfully. However, the timing limited the opportunity for broader regression testing, screenshot capture, and full documentation alignment before submission.

The original repository snapshot remains unchanged because it accurately records the verified state of the project at the time the contribution table was frozen. This addendum records the later repository-visible contribution separately so that the final contribution table reflects both the original consolidation workload and the subsequent implementation update.

1. Completed Contributions

Team Member	Contribution Area	Actual Work Completed	Output / Artefact
Chelsea	Project Coordination	Coordinated project progress, organised tasks, tracked deliverables, managed milestone preparation, and supported submission planning across the project lifecycle.	Project coordination, task organisation, submission planning
Chelsea	Repository Management	Created, configured, and maintained the GitHub repository as the central workspace for code, documentation, project artefacts, diagrams, screenshots, and final submission materials.	GitHub repository, project workspace
Chelsea	Advisor Communication	Managed communication with the project advisor and maintained records from meetings and milestone discussions.	Advisor updates, meeting records
Chelsea	Meeting Documentation	Prepared and maintained meeting agendas and minutes, including asynchronous project discussions, decisions, task allocations, and follow-up actions.	Meeting agendas and minutes
Chelsea	Initial System Setup and Proof-of-Life Integration	Created the initial frontend and backend structure, configured CORS, connected the frontend and backend, verified the initial health endpoint, and captured proof-of-life evidence showing the local system running successfully.	Initial integrated prototype and proof-of-life evidence
Chelsea	Core Backend API Implementation	Implemented the core FastAPI application and document-processing API, including health checks, document listing, metadata retrieval, text retrieval, PDF upload, input validation, OCR fallback integration, deletion, keyword search, semantic search, hybrid search, similar-document retrieval, reindexing, file serving, and export support.	Core backend API implementation
Chelsea	Backend Service-Layer Implementation	Implemented the initial backend service layer for PDF extraction, OCR, metadata enrichment, extractive summarisation, semantic embeddings, local vector persistence, clustering support, document retrieval, and filesystem-backed storage.	Backend processing and storage services

Chelsea	Search and Retrieval Implementation	Implemented the initial TF-IDF keyword-search workflow, semantic-search integration, hybrid-search ranking, local similar-document retrieval, and semantic-index handling later refined during integration.	Search and retrieval functionality
Chelsea	Local Storage and Document Lifecycle	Implemented local file storage, extracted-text persistence, metadata JSON storage, index persistence, document hashing, record retrieval, and deletion handling for stored papers.	Local storage and document-management layer
Chelsea	Prototype Interface Implementation	Built the earlier working prototype interface and workflow screens for upload, papers, clustering, export, report generation, and supporting navigation before the final React interface was consolidated.	Working interface prototype
Chelsea	Core React Frontend Implementation	Implemented the core React/Vite interface structure and user workflow, including routing, upload-page behaviour, multi-file upload progress, PDF preview, All Papers display, search-mode handling, cluster loading, cluster-detail views, export configuration, and backend communication.	Core React/Vite frontend workflow
Chelsea	Frontend-Backend Integration	Integrated the frontend workflow against backend endpoints for upload, document retrieval, metadata, text extraction, search, clustering, deletion, and export, and corrected mismatches between documented behaviour and the implemented system.	Integrated frontend-backend workflow
Chelsea	Project Documentation	Wrote major project-documentation sections including the problem description, project scope, project need, risk management, skills identification, stakeholder analysis, GitHub section, meeting records, and references.	Initial project documentation
Chelsea	Documentation Integration	Edited, rewrote, expanded, shortened, polished, and integrated group material into coherent final submissions.	Integrated project reports

Chelsea	Presentation Content	Wrote and finalised major presentation content including roles, problem and goals, requirements and scope, market analysis, features, technical requirements, risks, timeline, Gantt chart, conclusion, and speaker notes.	Presentation content and notes
Chelsea	Presentation Quality Assurance	Rewrote and edited design principles, user-flow material, mockup explanations, and speaker notes for consistency.	Finalised presentation material
Chelsea	Presentation Scripts	Rewrote and revised scripts for her own sections and Nishad's allocated sections in the marketing and technical videos.	Revised video scripts
Chelsea	Voice-over Support	Completed narration for her own sections and covered missing voice-over sections where required.	Final voice-over components
Chelsea	System Alignment	Reviewed implemented functionality against documented requirements and corrected mismatches between the system, reports, and presentation material.	Technical alignment, consistency checks
Chelsea	Design Progress Documentation	Wrote the full design progress documentation, including requirements mapping, architecture, information architecture, interface design, branding and style guide, functionality walkthrough, limitations, risks, appendices, and references.	Design progress report
Chelsea	Technical Diagrams	Developed and finalised system-overview, architecture, workflow, sequence, route-structure, data-storage, and data-lifecycle diagrams for the final technical report and supporting documentation.	Technical diagrams
Chelsea	Interaction Design	Wrote the primary interaction sequence and workflow walkthrough.	Interaction-design documentation
Chelsea	Technical Report	Wrote and assembled the final technical report, including final requirements, scope and iteration management, project summary, requirements traceability, system design, testing documentation, installation guidance, closeout, lessons learned, transition plan, and future work.	Final technical report

Chelsea	User Manual	Wrote and assembled the final user manual, including target-user guidance, quick-start instructions, step-by-step walkthroughs, expected results, screenshots, and troubleshooting guidance.	Final user manual
Chelsea	Runtime Verification	Cloned and ran the final repository locally, installed dependencies, started the frontend and backend services, verified confirmed endpoints, captured runtime evidence, and documented the tested build state.	Runtime verification evidence
Chelsea	Interface Screenshots	Prepared and inserted final interface screenshots across the technical report and user manual, including upload, all papers, search, cluster, export, backend health, Swagger UI, and runtime evidence.	Interface and installation screenshots
Chelsea	Code-Snippet Evidence	Located, captured, labelled, and inserted repository code evidence for frontend routing, API helpers, upload processing, OCR, metadata, summarisation, storage, search, clustering, deletion, and export functionality.	Code-snippet evidence
Chelsea	Contribution Records	Prepared the actual-work-completed table, contribution records, and reflection material.	Contribution table, reflection material
Chelsea	Repository Documentation and Packaging	Updated repository documentation, consolidated final project materials, checked setup guidance, and prepared source-code and documentation materials for submission and project-site access.	Final repository documentation package
Chelsea	Final Documentation Consolidation	Organised the final documentation package and completed outstanding submission-critical work, including screenshot insertion, manual updates, figure placement, formatting, terminology, cross-references, completeness checks, and submission-readiness review.	Final documentation package and quality-assurance pass
Noor	Market Analysis	Drafted market-analysis material during the early project-documentation stage.	Market-analysis input
Noor	Ethical Approach	Drafted group ethical-approach content during the early documentation stage.	Ethical-approach input

Noor	Group Charter Input	Drafted individual charter material later combined and refined into the final group charter.	Charter input
Noor	Minor Document Review	Provided minor review support, including shortening suggestions, misnumbering checks, word-count suggestions, and gap-covering comments before final integration.	Minor quality-control comments
Noor	Design Principles	Contributed original material for design principles. Final rewriting and editing were completed by Chelsea.	Design-principles input
Noor	User Flow and Mockups	Contributed original material for user flow and mockups. Final rewriting and editing were completed by Chelsea.	User-flow and mockup input
Noor	Speaker Notes	Wrote original speaker notes for his allocated section before final editing.	Speaker-notes input
Noor	UI and Wireframe Assets	Prepared wireframes, Figma mockups, screen layouts, interface specifications, visual-styling guidance, and final interface designs for major system pages.	Wireframes, mockups, UI assets
Noor	Backend Metadata Refinement	Refined metadata-source handling, metadata comparison, reliability assessment, and supporting backend behaviour for final metadata selection.	Metadata-processing refinements
Noor	PDF-Processing Refinement	Added and refined supporting PDF-processing behaviour and backend integration updates.	PDF-processing updates
Noor	Schema and Summary Refinement	Updated backend schemas and refined summary-handling behaviour to support the final metadata structure.	Schema and summary updates
Noor	Backend Integration Refinement	Refined backend application logic for metadata retrieval, document handling, upload processing, recommendation behaviour, and export-related consistency.	Backend integration updates
Noor	Feature Cleanup and Refinement	Contributed later-stage cleanup and refinement to metadata, search, recommendations, API structure, and implemented workflows.	Feature-refinement updates

Noor	Technical Feature Documentation Support	Prepared feature descriptions, implementation summaries, workflow explanations, and technical notes covering metadata extraction, search, recommendations, summarisation, clustering, and document-processing functionality to support report and presentation preparation.	Feature summaries
Noor	Testing and Debugging	Conducted development-stage testing, validation, debugging, and refinement across upload, metadata, search, recommendations, frontend rendering, API integration, and data-mapping workflows.	Testing and debugging updates
Noor	Final Testing Documentation	Completed final manual testing, updated test outcomes and limitations, and prepared testing-evidence documentation for Sections 17 and 18 of the technical report during final consolidation.	Final testing matrix and evidence register
Noor	Presentation Slides and Notes	Prepared presentation slides and supporting notes for communicating the system.	Presentation slides and notes
Noor	Visual Communication	Contributed to the visual communication and presentation of system functionality.	Visual-presentation material
Noor	Video Production	Completed the main marketing-video and technical-video materials.	Marketing video, technical video
Noor	Marketing Assets	Supplied or supported the video, presentation, caption, transcript, and poster assets used in the final project package.	Marketing assets, poster materials
Nishad	Presentation Delivery	Delivered assigned speech content during formal presentation delivery.	Presentation delivery
Nishad	Demo Recording	Recorded the prototype-demonstration video.	Prototype demo video
Nishad	Technical Video Voice-over	Provided voice-over narration for his allocated section in the technical video.	Technical-video narration
Nishad	Export Page and PDF Report Refinement (Post-Snapshot Contribution)	Pushed final refinements for the Export-page workflow. Aligned the frontend export options with backend PDF handling, disabled unsupported CSV and JSON formats, and added configurable report content including summaries, keywords, charts, and recommended papers.	Post-snapshot export and PDF-report implementation; repository-visible and runtime checked after the snapshot.

		Expanded the generated PDF report with analytics and processed-paper information.	
Nishad	Clustering Feature Refinement (Post-Snapshot Contribution)	Pushed clustering refinements including silhouette-scored cluster-count selection, centroid-based outlier detection, singleton reassignment, an Other group, and TF-IDF keyword descriptions for generated clusters.	Post-snapshot clustering implementation; repository-visible and runtime checked after the snapshot.
Nishad	AI Summary Integration (Post-Snapshot Contribution)	Added a per-paper summary page, on-demand DistilBART summary generation, selectable short, medium, and long output lengths, and frontend controls for regenerating and replacing summaries.	Post-snapshot AI-summary implementation; repository-visible and runtime checked after the snapshot.
Nishad	Summary Persistence, Recovery, and GPU Support (Post-Snapshot Contribution)	Added GPU-status reporting, stored-summary replacement, preservation of the original extractive summary, and recovery behaviour so the previous summary can be restored where required.	Post-snapshot summary-management implementation; repository-visible and runtime checked after the snapshot.
Nishad	Related-Paper Recommendations and Final Prototype Integration (Post-Snapshot Contribution)	Refined related-paper recommendations using Semantic Scholar where available and local semantic similarity as a fallback. Added supporting frontend, backend, dependency, configuration, and repository-documentation updates.	Post-snapshot recommendation and final-integration update; repository-visible and runtime checked after the snapshot.

Note: Nishad's coding contributions were not visible on the main branch when the contribution table was originally finalised at 31 May 2026, 11:30 pm AEST. The implementation work listed above was pushed during the morning of submission and is therefore recorded as a post-snapshot contribution. Noor subsequently completed a runtime check and confirmed that the updated build was running successfully. The original repository snapshot remains unchanged because it accurately records the project state available during the earlier final-consolidation period.

2. Code and Feature Contribution Summary

Team Member	Code / Feature Area	Actual Coding Work Completed
Chelsea	Repository and Project Foundation	Set up the initial project structure and maintained the GitHub repository as the central workspace for source code, technical documentation, screenshots, diagrams, and submission artefacts.
Chelsea	Initial Frontend Setup	Created the first working frontend structure, including the initial browser interface and frontend status check.
Chelsea	Initial Backend Setup	Created the initial FastAPI backend, backend requirements, and health-check endpoint.
Chelsea	Frontend / Backend Connection	Connected the frontend and backend during early development and resolved the initial frontend-backend communication issue.
Chelsea	CORS Configuration	Added CORS middleware so the frontend could communicate successfully with the backend during local development.
Chelsea	Proof-of-Life Integration	Confirmed that the frontend and backend were working together through early integration testing and proof-of-life evidence.
Chelsea	Core Backend API Implementation	Implemented the main FastAPI application and core API routes for health checks, document listing, PDF upload, text retrieval, metadata retrieval, deletion, search, similar-document retrieval, reindexing, clustering access, PDF serving, and export.
Chelsea	Backend Schema Implementation	Added backend schema definitions for uploaded documents, metadata, upload responses, summary requests and responses, search requests and responses, search hits, metadata responses, and extracted-text responses.

Chelsea	PDF Upload and Processing Workflow	Implemented the PDF-upload workflow, including file validation, local file saving, text extraction, OCR fallback checks, metadata extraction, summary generation, semantic indexing, preview generation, and response handling.
Chelsea	OCR Integration	Added OCR fallback support for PDFs with insufficient extractable text and integrated OCR behaviour into the upload-processing pipeline.
Chelsea	Metadata-Enrichment Foundation	Added the initial metadata-extraction and enrichment service used to derive paper information from extracted text and support external metadata lookup.
Chelsea	Summary-Generation Foundation	Added the initial extractive-summary service and integrated summary generation into document processing and metadata retrieval.
Chelsea	Keyword Search Implementation	Implemented TF-IDF keyword search, including cached document vectors, cosine-similarity ranking, query handling, relevance scoring, and ranked result generation.
Chelsea	Semantic Search Implementation	Added semantic-search integration using SPECTER2 sentence-transformer embeddings, persisted semantic vectors, document-level retrieval, and optional FAISS acceleration where installed.
Chelsea	Hybrid Search Implementation	Implemented hybrid-search ranking by combining keyword and semantic relevance scores into a unified ranked result set.
Chelsea	Similar-Document Retrieval	Implemented local similar-document retrieval using semantic embeddings and relevance thresholds.
Chelsea	Semantic Index Handling	Added semantic-document indexing, embedding persistence, document removal, index loading, and reindexing behaviour.
Chelsea	Local Storage and Document Lifecycle	Implemented filesystem-backed storage for uploaded PDFs, extracted text, metadata JSON files, document hashes, index persistence, document lookup, and deletion handling.
Chelsea	Clustering Support	Added clustering support for processed documents, including document-vector handling, K-Means integration, cluster generation, and supporting keyword behaviour.

Chelsea	Prototype Interface Implementation	Built the earlier working prototype screens for upload, paper browsing, clustering, export, report generation, and supporting navigation before the final React interface was consolidated.
Chelsea	Core React / Vite Frontend Structure	Implemented the core React/Vite application structure, routing, navigation, shared components, styling foundation, and page-level workflow across Upload, All Papers, Cluster, and Export.
Chelsea	Upload Page Workflow	Implemented the Upload-page workflow, including stored-document loading, backend communication, navigation, and file-processing flow.
Chelsea	Multi-File Upload and Progress Handling	Implemented multi-file upload handling, upload-progress tracking, processing status updates, completed and failed states, drag-and-drop behaviour, file removal, and PDF preview support.
Chelsea	All Papers Page Workflow	Implemented the All Papers-page structure, paper listing, metadata display, summary display, search-state handling, document-detail modal behaviour, deletion controls, loading states, and error handling.
Chelsea	Search Interface Integration	Integrated keyword, semantic, and hybrid-search modes into the frontend and displayed ranked results with relevance scores and mode descriptions.
Chelsea	Cluster Page Workflow	Implemented cluster-page loading, document hydration, cluster cards, search filtering, sorting behaviour, grouped-paper display, and cluster-detail modal handling.
Chelsea	Export Workflow Foundation	Implemented the core export-page configuration and backend export pathway used to generate downloadable PDF reports from processed papers and clusters.
Chelsea	Frontend API Integration	Integrated frontend requests against backend routes for upload, document retrieval, metadata, extracted text, deletion, search, clustering, similar-document handling, and export.
Chelsea	Final Code Alignment and Runtime Verification	Reviewed the merged codebase, ran the final repository locally, installed dependencies, verified confirmed endpoints, captured runtime evidence, and aligned the documentation against the tested build.
Noor	UI / Wireframe Assets	Prepared wireframes, Figma mockups, screen layouts, interface specifications, visual-styling guidance, and final interface designs for the major system pages.

Noor	Metadata-Comparison Refinement	Added and refined metadata-source comparison behaviour used to assess extracted and externally enriched metadata, including confidence and reliability handling.
Noor	Metadata-Selection Refinement	Refined backend handling for PDF metadata, external metadata, final selected metadata, and summary values used in document responses.
Noor	PDF-Processing Refinement	Added and refined supporting PDF-processing behaviour and backend integration updates for the final document-processing flow.
Noor	Schema Refinement	Updated backend schemas to support the final metadata structure and associated API responses.
Noor	Summary-Handling Refinement	Refined summary handling, fallback behaviour, and integration with the final metadata structure.
Noor	Metadata Retrieval Refinement	Updated metadata-retrieval behaviour, including safer document lookup, external Semantic Scholar retrieval, metadata comparison, selected-metadata handling, and summary fallback behaviour.
Noor	Similar-Document and Recommendation Refinement	Refined similar-document response handling and external-recommendation fallback behaviour.
Noor	Upload-Pipeline Refinement	Refined backend upload-processing behaviour, logging, metadata storage, semantic-index integration, and error handling.
Noor	Backend Integration Refinement	Refined backend application logic across metadata, upload processing, recommendation behaviour, reindexing, and export-related consistency.
Noor	Feature Cleanup and Debugging	Conducted later-stage cleanup, testing, debugging, and refinement across implemented workflows.
Noor	Final Testing Documentation	Completed final manual testing, updated test outcomes and limitations, and prepared testing-evidence documentation for Sections 17 and 18 of the technical report during final consolidation.
Nishad	Export Page and PDF Report Refinement (Post-Snapshot Contribution)	Refined the Export page and backend PDF-report workflow. Aligned nested frontend export options with backend handling, disabled unsupported CSV and JSON choices, and added configurable report inclusions, analytics charts, and recommendation output.

Nishad	Clustering Feature Refinement (<i>Post-Snapshot Contribution</i>)	Added silhouette-scored cluster-count selection, centroid-based outlier detection, singleton reassignment, an Other group, and improved TF-IDF keyword descriptions for generated clusters.
Nishad	AI Summary Integration (<i>Post-Snapshot Contribution</i>)	Added the FullSummary page and /papers/:id route for on-demand DistilBART summary generation with short, medium, and long output targets.
Nishad	Summary Persistence, Recovery, and GPU Support (<i>Post-Snapshot Contribution</i>)	Added GPU-status reporting, backend abstractive-summary generation, stored-summary replacement, preservation of the original extractive summary, and summary-recovery endpoints.
Nishad	Recommendation and Final Integration Refinement (<i>Post-Snapshot Contribution</i>)	Refined Semantic Scholar recommendation handling with local semantic-similarity fallback and added supporting frontend, backend, dependency, configuration, and repository-documentation updates.

Note: Nishad's coding contributions became repository-visible after the original **31 May 2026, 11:30 pm AEST** snapshot and are recorded as post-snapshot contributions. Noor completed a runtime check during the morning of submission and confirmed that the updated build was running successfully. See **Section 0: Repository Evidence Snapshot** and the **Post-Snapshot Addendum**.

3. Contribution Table Per Assignment Submission

3.1 Assignment 1 Project Description

Task Allocation

At the start of the project, responsibilities were divided among team members. The table below records the initial allocation, with notes indicating where sections were later shortened, revised, or re-written to maintain consistency.

Section	Primary Author (Assigned)	Notes (Revisions / Secondary)
1. Initial Problem Description	Chelsea	—
2. Meeting Details	Chelsea	Shortened and tightened wording.
3. Initial Project Scope	Chelsea	Shortened for clarity.
4. Scope Management	Azwad	Sections 4.4–4.7 re-written and polished by Chelsea.
5. Project Need	Chelsea	Shortened for conciseness.
6. Market Analysis	Noor	Light edits by Chelsea for clarity.
7. Time Management	Nishad	Re-written and expanded by Chelsea for completeness.
8. Quality Management Plan	Nishad	Re-written and expanded by Chelsea for completeness.
9. Risk Management	Chelsea	Shortened and refined for clarity.
10. Initial Identification of Skills	Chelsea	Shortened and refined for conciseness.
11.1 Stakeholder Analysis	Azwad	Initial four stakeholders listed by Azwad; expanded and power-interest grid created by Chelsea
11.2 Group Project Charter	ChelseaNoor	Chelsea and Noor both drafted individual versions. Final combined and refined version authored by Chelsea.
11.3 Group Ethical Approach	Noor	Edited by Chelsea for flow and consistency.
11.4 GitHub Link	Chelsea	Repository created, configured, and maintained by Chelsea; link and commit history included in appendix for reference.

11.5 Meeting Agendas & Minutes	Chelsea	–
References	Chelsea	Collated and formatted all references.

Colour Coding Key

- Chelsea
- Noor
- Azwad
- Nishad

Note: All document editing, integration, and quality assurance were completed by Chelsea to ensure consistency of style, tone, and structure across sections. Noor additionally assisted with minor QC by suggesting where sections could be shortened, pointing out misnumbering, proposing word count adjustments, and drafting material (e.g., for Section 11.2) to help cover gaps before final integration.

3.2 Assignment 2 Presentation

Task Allocation (Presentation)

At the start of the project, responsibilities were divided among team members. The table below records the initial allocation, with notes indicating where sections were later shortened, revised, or re-written to maintain consistency.

Section	Primary Author (Assigned)	Notes (Revisions / Secondary)
1. Team Roles and Responsibilities	Chelsea	
2. Problems and Goals	Chelsea	
3. Requirements and Scope	Chelsea	
4. Market and Analysis	Chelsea	Originally assigned to Azwad but no deliverable provided
5. Design Principles	Noor	Developed the frontend design approach, including design principles, interface consistency guidelines, and user experience considerations. Re-written and edited by Chelsea
6. User Flow & Mockups	Noor	Created user flows, wireframes, screen layouts, and Figma mockups illustrating the proposed system interface and navigation. Rewritten and edited by Chelsea
7. Features	Chelsea	Originally assigned to Nishad but no deliverable provided
8a. Technical Requirements (Backend)	Chelsea	Originally assigned to Nishad but no deliverable provided
8b. Technical Requirements (Infrastructure)	Chelsea	Originally assigned to Azwad but no deliverable provided
9. Supervisor/Client Interaction	Chelsea	Originally assigned to Nishad but no deliverable provided
10a. Risk Overview	Chelsea	
10b. Risk (High Priority)	Chelsea	
10c. Risk (Project Management)	Chelsea	

10d. Risk (Technical)	Chelsea	
10e. Usability and Organisational	Chelsea	
11a. Timeline	Chelsea	Originally assigned to Nishad but no deliverable provided
11b. Gantt Chart	Chelsea	Originally assigned to Nishad but no deliverable provided
12. Conclusion	Chelsea	
Speaker's Notes	Chelsea	Noor wrote the original speaker's notes for his section before they were re-edited by Chelsea
Presenting	Nishad	Nishad presented on presentation day

Colour Coding Key

- Chelsea
- Noor
- Azwad
- Nishad

Note: All document editing, integration, and quality assurance were completed by Chelsea to maintain consistency of style, tone, and structure across sections. No additional quality control was performed outside of individual section drafting.

3.3 Assignment 3 Presentation

Task Allocation

At the start of the presentation task, responsibilities were divided among team members. The table below records the final contribution breakdown, including where material was revised, completed, or integrated by another member.

Section / Task	Primary Author (Assigned)	Notes (Revisions / Secondary)
Slide Deck Structure	Chelsea	Created and finalised the overall presentation structure.
Majority of Slides	Chelsea	Designed and completed most slides across the presentation.
Project Overview / Workflow Slides	Chelsea	Wrote and structured the explanation of SmartResearch, including upload, browse, cluster, and export flow.
Requirements / Features Slides	Chelsea	Wrote and prepared the requirements, feature, and system explanation slides.
Risk / Timeline Slides	Chelsea	Created the risk, timeline, sprint plan, and supporting planning slides.
Gantt Chart	Chelsea	Created the Gantt chart used in the presentation.
Presentation Script / Speeches	Chelsea	Wrote the speech/script content for the slides.
Slide Editing and Integration	Chelsea	Edited, integrated, and standardised the final slide deck for consistency.
Slide Support	Noor	Completed his assigned slides and assisted with some slide/design material.
Figma Designs	Noor	Completed Final figma designs
User Persona	Noor	Created user personas to represent target users and guide design decisions based on user needs and goals.
Style Sheet	Noor	Developed the project style sheet, including colours, typography, and UI standards to ensure a consistent interface design.
Presentation Delivery	Nishad	Delivered the assigned speech content during the presentation.

Colour Coding Key

- Chelsea
- Noor

- Nishad

Note: The majority of the assignment 3 presentation preparation, including the slide deck, Gantt chart, speech/script writing, editing, integration, and quality assurance, was completed by Chelsea. Noor provided limited slide/design support. Nishad's contribution was limited to delivering the assigned speech content during the presentation.

3.4 Assignment 4 Design Progress Documentation

Task Allocation

At the start of the documentation task, responsibilities were divided among team members. The table below records the final contribution breakdown, including where work was written, integrated, or prepared for the submission.

Section / Task	Primary Author (Assigned)	Notes (Revisions / Secondary)
Project Coordination	Chelsea	Coordinated project progress, task organisation, and submission preparation.
Repository Management	Chelsea	Set up and maintained the GitHub repository as the central workspace for code and documentation.
Advisor Communication	Chelsea	Managed meeting documentation and communication with the project advisor.
Frontend Development	Chelsea	Designed and implemented frontend structure, routing, UI flow, and backend endpoint integration.
Documentation Leadership	Chelsea	Led writing, integration, editing, and final quality control across project documentation.
Backend Support	Chelsea	Supported backend development and integration across extraction, summarisation, search, clustering, and metadata handling.
System Alignment	Chelsea	Aligned the implemented system with the technical descriptions in the report.
Full Design Progress Documentation	Chelsea	Wrote the full assignment 4 design progress documentation.
Diagrams	Chelsea	Developed and finalised activity, sequence, and data/storage diagrams.
Interaction Design	Chelsea	Wrote the primary interaction sequence and supporting design sections.
Technical Alignment	Chelsea	Reviewed and aligned technical descriptions with the implemented system.
Submission Structure	Chelsea	Structured appendices, figure captions, cross-references, and report layout.
Backend / Application Updates	Noor	Contributed updates to application logic, schemas, and supporting services.

System Integration	Noor	Integrated frontend and backend components and ensured compatibility between project modules.
Testing and debugging	Noor	Identified, investigated, and resolved issues related to metadata accuracy, search functionality, summaries, and system behaviour.
Github updates	Noor	Managed code updates and project repository contributions.
Design Support	Noor	Assisted with design-related components and drafting support during earlier stages.
Presentation Slides / Notes	Noor	Prepared presentation slides and supporting notes.
Visual Communication	Noor	Contributed to visual communication of system functionality.
Presentation Delivery	Nishad	Participated in presentation delivery during project assignments.
Demo Recording	Nishad	Recorded the prototype demonstration video.

Colour Coding Key

- Chelsea
- Noor
- Nishad

Note: The majority of assignment 4 documentation, including the full design progress report, diagrams, interaction design, technical alignment, submission structure, editing, integration, and quality assurance, was completed by Chelsea. Noor contributed backend/application updates, design support, and presentation materials. Nishad's recorded contribution was limited to presentation delivery and demo recording.

3.5 Assignment 5 Marketing and Technical Presentation

Task Allocation

At the start of the presentation task, responsibilities were divided among team members. The table below records the final contribution breakdown for the marketing and technical presentation materials.

Section / Task	Primary Author (Assigned)	Notes (Revisions / Secondary)
Marketing Video	Noor	Completed the main marketing video material.
Technical Video	Noor	Completed the main technical video material.
Video Structure and Assembly	Noor	Prepared and assembled the main video content.
Presentation Assets	Noor	Prepared supporting visual and presentation assets used in the videos.
Technical Content	Noor	Included system functionality and implementation material in the technical presentation.
Script Revisions	Chelsea	Rewrote and revised the scripts for Marketing and Technical video to improve clarity, consistency, and delivery quality.
Voice-over / Narration	Chelsea	Completed voice-over/narration for Marketing and Technical video.
Voice-over / Narration	Nishad	Provided voice-over/narration for allocated section in Technical video.
Submission Support	Chelsea	Assisted with aligning the video material with the project's public-facing image and submission requirements.
Video Files / Links	Noor	Responsible for supplying final video files or links for submission and project-site access.
Captions / Transcript Materials	Noor / Chelsea	Transcript/caption material required for accessibility was supported through the final script and video preparation process.

Colour Coding Key

- Chelsea
- Noor
- Nishad

Note: Noor completed the main marketing and technical video materials. Chelsea rewrote and revised the marketing and technical video scripts, completed voice-over/narration for her allocated sections, and assisted with submission alignment. Nishad provided voice-over/narration for his allocated section.

3.6 Assignment 6 Final Documentation and Submission Package

Task Allocation

The table below records work completed specifically for the final documentation and submission package. Contributions completed in earlier assignments are recorded in their original assignment sections and are not repeated here.

Section / Task	Primary Author / Contributor	Notes (Revisions / Secondary)
Final Documentation Planning	Chelsea	Organised the required submission items, final document structure, appendices, evidence requirements, and packaging process.
Technical Report	Chelsea	Wrote and assembled the final technical report, including final requirements, project summary, requirements traceability, system design, implementation discussion, testing documentation, installation guidance, project closeout, transition planning, and future work.
User Manual	Chelsea	Wrote and assembled the final user manual, including quick-start guidance, feature walkthroughs, expected results, screenshots, troubleshooting, and known limitations.
Final System Requirements	Chelsea	Documented the final implemented features, scope changes, supported workflows, and known limitations.
Requirements Traceability Matrix	Chelsea	Mapped the original project requirements against the final implemented system and recorded confirmed, partial, and deferred outcomes.
System Design Documentation	Chelsea	Documented the final architecture, information architecture, storage model, runtime behaviour, workflows, and frontend-backend communication.
Technical Diagrams	Chelsea	Created and inserted the final system-overview, architecture, workflow, sequence, route-structure, data-storage, and data-lifecycle diagrams.
Code-Snippet Evidence	Chelsea	Located, captured, labelled, and inserted repository code evidence for frontend routing, API helpers, upload processing, OCR, metadata, summarisation, storage, search, clustering, deletion, and export functionality.

Runtime Verification	Chelsea	Cloned and ran the final repository locally, installed dependencies, started the frontend and backend services, verified confirmed endpoints, and captured runtime evidence.
Interface Screenshots	Chelsea	Prepared and inserted final interface screenshots across the technical report and user manual, including upload, all papers, search, cluster, export, backend health, Swagger UI, frontend startup, and generated PDF evidence.
Installation Process	Chelsea	Prepared installation, startup, backend-health, Swagger UI, and frontend-run instructions for the final package.
System Testing Documentation	Chelsea	Prepared the testing structure, documented test coverage and limitations, and integrated testing evidence into the final report.
Project Closeout	Chelsea	Wrote lessons learned, project acceptance, transition planning, future work, and final closeout material.
Meeting Agendas and Minutes	Chelsea	Prepared and maintained final meeting records, including asynchronous discussions, task allocations, decisions, and follow-up actions.
Actual Work Completed Table	Chelsea	Prepared and updated the final contribution records and actual-work-completed tables.
Individual Reflection	Chelsea	Prepared individual reflection material.
Documentation Editing and Integration	Chelsea	Edited, integrated, formatted, and standardised the final documentation package.
Final Quality Assurance	Chelsea	Checked consistency, terminology, figure placement, cross-references, formatting, completeness, placeholder removal, and submission readiness.
Source Code / Repository Materials	Chelsea	Organised repository and source-code materials, updated supporting documentation, and prepared final repository materials for submission and project-site access.
Final Package Integration	Chelsea	Consolidated the final submission package and included previously completed project artefacts where required.

Backend Refinement	Noor	Refined metadata handling, PDF-processing behaviour, schema support, summary handling, upload processing, recommendation behaviour, and backend integration consistency for the final build.
Testing and Debugging	Noor	Conducted final-stage testing, debugging, and refinement across upload, metadata, search, recommendations, frontend integration, and document-management workflows.
Final Testing Documentation	Noor	Completed final manual testing, updated test outcomes and limitations, and prepared testing-evidence documentation for Sections 17 and 18 of the technical report during final consolidation.
Technical Feature Documentation Support	Noor	Prepared implementation summaries, workflow explanations, and technical notes to support the final report.
Export Page and PDF Report Refinement (<i>Post-Snapshot Contribution</i>)	Nishad	Pushed final Export-page and PDF-report refinements during the morning of submission, including frontend-backend option alignment, disabled unsupported CSV and JSON formats, configurable report content, and analytics output.
Clustering Feature Refinement (<i>Post-Snapshot Contribution</i>)	Nishad	Pushed final clustering refinements during the morning of submission, including silhouette-scored cluster-count selection, outlier handling, singleton reassignment, an Other group, and TF-IDF keyword descriptions.
AI Summary, Persistence, and Recovery Integration (<i>Post-Snapshot Contribution</i>)	Nishad	Pushed the per-paper AI-summary workflow during the morning of submission, including on-demand DistilBART summaries, selectable summary lengths, GPU-status reporting, stored-summary replacement, and original-summary recovery behaviour.
Related-Paper Recommendations and Final Prototype Integration (<i>Post-Snapshot Contribution</i>)	Nishad	Pushed recommendation refinements and supporting frontend, backend, dependency, configuration, and repository-documentation updates during the morning of submission.

Note

The Assignment 6 final documentation and submission package was primarily prepared and consolidated by Chelsea. This included the technical report, user manual, requirements traceability matrix, system-design documentation, technical diagrams, code-snippet evidence, installation instructions, runtime verification, interface screenshots, testing-documentation integration, project

closeout, meeting records, contribution records, reflection material, repository documentation, formatting, and final quality assurance.

Noor contributed final-build backend refinement, testing, debugging, technical-feature documentation support, testing-evidence documentation, and post-snapshot runtime verification of the updated build.

Nishad pushed substantial late implementation work during the morning of submission, including Export-page and PDF-report refinements, clustering refinements, AI-summary and recovery integration, recommendation updates, and supporting final-prototype integration work. These post-snapshot contributions were runtime checked by Noor and are recorded separately from the original **31 May 2026, 11:30 pm AEST** repository snapshot. See **Section 0: Repository Evidence Snapshot** and the **Post-Snapshot Addendum**.
